

A. Model fit

B. Mean parameter values from best model

diversification parameters

$$\hat{\tau}_A = \frac{1}{|A|} \sum_{(i \rightarrow j) \in A} (\lambda_i + \mu_i) \quad \hat{r}_A = \frac{1}{|A|} \sum_{(i \rightarrow j) \in A} (\lambda_i - \mu_i)$$
$$\hat{\tau}_B = \frac{1}{|B|} \sum_{(i \rightarrow j) \in B} (\lambda_i + \mu_i) \quad \hat{r}_B = \frac{1}{|B|} \sum_{(i \rightarrow j) \in B} (\lambda_i - \mu_i)$$

trait evolution parameters

$$\hat{q}_A = \frac{1}{|A|} \sum_{(i \rightarrow j) \in A} q_{ij}$$
$$\hat{q}_B = \frac{1}{|B|} \sum_{(i \rightarrow j) \in B} q_{ij}$$

C. Slope of rate class parameter means
